The Arizona Telemedicine Program Blog

Reimagining the Future of Telemedicine in a Post-COVID World

By Dr. Leo P. Langlois on Apr 08, 2021

As with any healthcare innovation that is disruptive in nature, it takes validation and time, as well as the right catalyst before it gets completely embraced by the global community as a feasible solution. With the ongoing COVID-19 global health emergency, one such innovation that acquired center stage for being highly functional and transformed healthcare delivery in a never-seen-before manner was telemedicine.

Just last year, telemedicine grew from less than 1% of primary care visits to nearly 43.5% in a mere span of two months (February to April).

With telemedicine's current rapid adoption rate and trajectory, it wouldn't be wrong to say that this state-of-the-art innovation holds the potential to turn the medical industry completely upside-down, redefining the way in which health systems deliver care, operate, and manage costs. This will further set the foundation for a highly optimized and tailored healthcare experience in the future.

Service Provider Directory

DIRECTORY OVERVIEW

Welcome to the Telemedicine & Telehealth Service Provider Directory, a service of the Arizona Telemedicine Program. The directory is a resource for hospital and healthcare administrators and other decision-makers who want to expand or improve their healthcare services to their patients, employees, clients, etc. The directory lists companies providing medical specialty services (such as radiology, rheumatology, neurology, psychiatry) and ancillary services (such as patient education and language interpretation) through telemedicine to healthcare providers such as hospitals, clinics, nursing homes, private practices and urgent care centers.

Service Providers: List your company here.

Featured: Medical Science Education Innovation

Ronald S. Weinstein, MD, Unveils Flexner 3.0 Medical Science Curriculum at Johns Hopkins School of Medicine

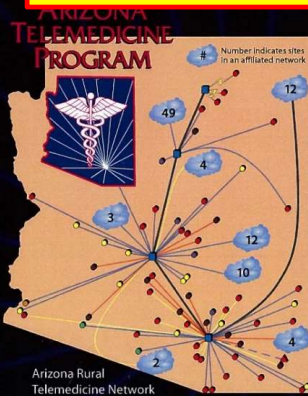

"Flexner 3.0," Dr. Weinstein's latest invention, recalibrates health science education for the United States by repositioning "introduction to medical science coursework" from medical schools into K-12 schools. His Flexner 3.0 program also calls for reducing high school education by two years, and college and medical schools' by one year each. Dr. Weinstein states, "It was an honor to be invited to introduce the Flexner 3.0 curricular model at Johns Hopkins School of Medicine, the institution that pioneered our current standard model for medical education. [Click here](#) to see more information about Flexner 3.0.

Visible Social Networking Platforms

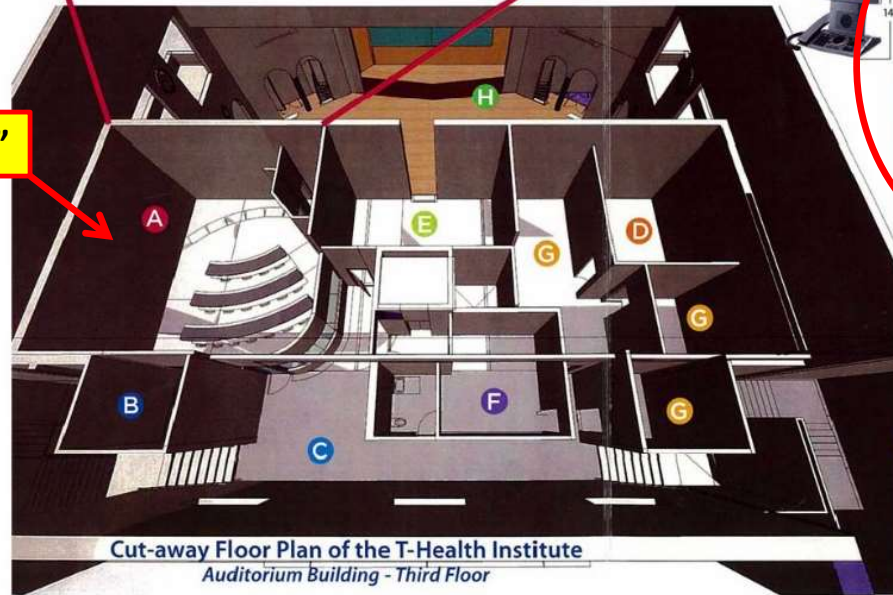

These illustrations show iconic representations of stacks of medical students (upper left), nursing students (upper right), pharmacy students (lower left), and public health students (lower right). **Top Row:** diagrammatic representation of four layers of the stacks. **Bottom Row:** diagrammatic representation of "exploded" version of the electronic stacks of students. **Below:** Students can take portable "in a suitcase" video conferencing units (i.e., Tandberg T-150) with them for off-campus rural rotations, and then link themselves back into the T-Health Amphitheater in Phoenix by broadband Internet.

"e-Swaps" **NEW**

Graphic representation of T-Health Amphitheater 2 x 6 video cube wall. These schematic illustrations show how two e-groups in quads, i.e., a group of four medical students on the left, and four nursing students on the right (top figure), can be electronically reconfigured and reconstituted into interprofessional teams "on the fly." The students can be either on-campus or off-campus. The result is an admixture of medical students and nursing students in the two individual learning

"innovative video-based social networking tools"

working in single profession groups vs. multi-profession teams.
