16. Contributions to Diversity, Equity, and Inclusion

DEI has long been a passion of mine. My career has spanned two very male-dominated fields – radiology and physics/engineering. I remember the first time I went to the SPIE Medical Imaging meeting in 1988 and literally being the only woman in many of the sessions. This played out for many years there and at other meetings such as AAPM and RSNA. It was frustrating and sad to see such disparities in women and underrepresented minorities at these important meetings. When I joined the faculty at the University of Arizona in 1994, I was the first female research faculty member in the department – and very soon realized that I was also the lowest paid. It took years of hard work to get even close to what my male colleagues (many of whom joined after I did) were earning.

As a lab leader and instructor, I have made it my mission to attract women and URM into my field and expose them to the possibilities open to them in medical research. Throughout the years I have had many women and URM in my labs working on projects and going on to careers of their own in research or clinical practice. I believe that one of the best ways to promote and foster DEI is to act and serve as an example. I am aware of challenges, in particular unconscious biases. Unconscious biases can easily lead to differences in hiring, developing, and retaining a team member from an underrepresented group. Even subtle biases can create a significant barrier to cultivating a diverse and inclusive community. In recruiting a lab member, I review my job description to eliminate biased language. I empower lab members to notice and call out unconscious biases and provide a safe environment within which they hopefully feel comfortable enough to bring any concerns to me. During interviews, I outline attributes relevant to the role and tasks to avoid making decisions influenced by attributes not relevant to the role. During annual reviews, I address explicit job level expectations for assessing performance to minimize bias. In addition, I build relationships with people from underrepresented backgrounds both within and outside of our campus. This helps me minimize bias in decision-making. I encourage my lab members and students to involve the diversity efforts as well. I often survey my lab members and students monthly by asking for their perceptions of fairness or inclusiveness. This gives a guideline on where to improve.

At the national level, when I was Chair of the SPIE Medical Imaging Conference (2007), I established a Women's lunch so that young, female trainees could interact with more established female researchers in a dedicated, yet casual, setting. This lunch has continued and grown considerably since then. With SPIE I have also been involved with the student social that is held at every meeting, trying specifically to interact and encourage women and URM to stay in the field and find mentors that can help them achieve their goals. As current Chair of the RSNA Science Council, I have made it a key part of our strategic plan to develop ways to attract more women and URM to the meeting and more importantly to help them develop research portfolios so they can in the future present their research at the annual meeting. When I was President of the American Telemedicine Association, I created the student award that recognized excellence in research presentations and the scoring system took into account whether the trainees were women, URM or international. As President of the Medical Image Perception Society, I have submitted (and been awarded) R13 conference grants to support trainees at our meeting with particular emphasis on supporting women and URM. As incoming President of the Society for Education and the Advancement of Research in Connected Health, I will create similar initiatives.

At Emory I helped start our department's DEI Committee and co-chaired it for the first two years.

Currently I lead the data/research task force within the committee developing ways to translate our efforts into publications that can hopefully help our departments and institutions with their DEI efforts. DEI must also go beyond our faculty/staff/trainee composition and include attention to health equity considerations in our research, technology development, validation, and dissemination.

26. Research Focus:

My interests are in medical image perception, observer performance, decision making, fatigue, and human factors. I utilize eye-tracking to elucidate underlying perceptual and cognitive mechanisms associated with interpreting medical images as a function of training/expertise, display, and environment to understand why errors are made and develop techniques to avoid them.
