TELE-HOME HEALTH CARE:

'Care Beyond Walls and Wires' Enhances Life for Patients with Congestive Heart Failure

Case Study

More than 5 million people in the U.S. suffer from congestive heart failure (CHF), a Disease Control and Prevention (CDC). The annual cost is estimated at more than \$10 billion. Medications, and lost earnings, the CDC says. Northern Arizona Healthcare's "Care Beyond Walls and Wires" can improve CHF patients' health and reduce health care costs.

Woody Smith and his daughter, Rita Yazzie, used to drive as often as twice a month from their home on the Navajo Reservation to Flagstaff Medical Center, nearly two hours away. Mr. Smith is living with congestive heart failure, with symptoms so severe he required frequent hospitalizations.

But Mr. Smith can now stay at home for months without having to go to the hospital. His condition has resulted from congestive heart failure. The program called Care Beyond Walls and Wires is a telemedicine-enabled program that has helped improve the health of patients with congestive heart failure.

The program allows for home visits and readmissions, a significant cost savings for those who are hospitalized.

"It's phenomenal," says a registered nurse for Flagstaff-based Northern Arizona Healthcare, which runs the program. "Care Beyond Walls and Wires" is the best thing for my dad."

Ms. Yazzie says "Care Beyond Walls and Wires" is the best thing for my dad. It's the best thing for my dad. It's the best thing for my dad. It's the best thing for my dad.

And at 90, Mr. Smith has been able to return to his favorite activity: riding his horse.

Care Beyond Walls and Wires provides patients with a backpack containing the equipment they need to check their blood pressure, measure their oxygen level, and check their weight daily; the latter because patients with CHF can gain and drop weight suddenly. The data are automatically

transferred to a smart phone that transmits the information to Northern Arizona Healthcare's care coordination office, which provides the smart phone, monitoring equipment and backpack to every patient enrolled in Care Beyond Walls and Wires.

Some of the program's patients have no electricity at home, so they also are given

The San Diego telecommunications company Qualcomm was chosen to lead the project, with Maryland-based Zephyr Technology and Verizon providing software, smart phones and remote-monitoring hardware.

Northern Arizona Healthcare agreed to conduct a pilot project involving 50 patients. The project got under way in

"Care Beyond Walls and Wires is the best thing ever for me, and the best thing for my dad."

Rita Yazzie

the study if you lived in a rural area. Ms. Yazzie could live in Supai (and Canyon) or on the Navajo Reservation. Our patients are Hispanic, and white, and in their early 90s."

Care Beyond Walls and Wires ended on November 30, 2019. Northern Arizona Healthcare is continuing the program.

The program cost around \$650,000. Ms. Sorenson says, "We don't charge for the phone charges."

"With the investment," she says, "patients benefiting from the program are penalized hospitals for readmissions, including those who are readmitted and discharged."

"It's a tremendous patient benefit," she says. "Patients like the feeling that they have more control over their health." Ms. Sorenson says. "We couldn't have asked for anything more. It's a global win."

perspective, the idea for Care Beyond Walls and Wires originated with the National Institutes of Health Office of Public and Private Partnerships, which was looking for better ways to monitor patients with CHF who live in rural areas. The goal was to provide better care while keeping the patients out of the hospital, thus reducing health-care costs.

“White Boarding”

The advertisement features a teal background. On the left, a hand holds a smartphone displaying a doctor's profile with a stethoscope. Two speech bubbles are positioned above the phone. To the right, the text reads: 'TMC NOW' in large white letters, followed by 'FEELING SICK?' in bold white text. Below this, it says 'Talk to a doctor from home' and 'Access care 24/7'. A call to action states 'DOWNLOAD THE FREE APP TODAY!' with buttons for 'Download on the App Store' and 'Download on Google Play'. At the bottom of the ad, it says 'Your visit is just \$20 using the code SPRING20'. The footer includes the TMC HealthCare logo, the Mayo Clinic Care Network Member logo, and the website 'tmcaz.com/tmcnow'.

Abstract Article References Citing Articles (231) Metrics

BACKGROUND
The Extension for Community Healthcare Outcomes (ECHO) model was developed to improve access to care for underserved populations with complex health problems such as hepatitis C virus (HCV) infection. With the use of video-conferencing technology, the ECHO program trains primary care providers to treat complex diseases.

[Full Text of Background...](#)

METHODS
We conducted a prospective cohort study comparing treatment for HCV infection at the University of New Mexico (UNM) HCV clinic with treatment by primary care clinicians at 21 ECHO sites in rural areas and prisons in New Mexico. A total of 407 patients with chronic HCV

More Than Half of Kaiser Permanente's Patient Visits Are Done Virtually

by Kia Kokalitcheva @imkialikethecar OCTOBER 6, 2016, 7:15 PM EDT

Last year, patients and doctors interacted more than 110 million times in total.

“For the first time, last year, we had over 110 million interactions between our physicians and our members,” said Tyson, adding that 52% of them were done via smartphone, videoconferencing, kiosks, and other technology tools.
