

Digital Health and Quality Improvement

Dipu Patel, DMSc, MPAS, PA-C
Vice Chair of Innovation, Professor
University of Pittsburgh
AZ Telemedicine

Objectives

1. Understand the importance of digital health and quality improvement in transforming healthcare delivery.
 2. List two challenges and opportunities presented by the intersection of digital health and quality improvement
 3. Define the potential impact of digital health and quality improvement on healthcare outcomes and patient satisfaction
- 

A Venn diagram illustrating the intersection of Digital Health, Healthcare, and Technology. The diagram consists of three overlapping circles. The top circle is labeled 'Digital Health'. The bottom-left circle is labeled 'Healthcare'. The bottom-right circle is labeled 'Technology'. The intersection of all three circles is the central area. Below the circles, there are seven vertical bars of varying heights, each representing a specific technology or application. The bars are labeled from left to right: mHealth, EHRs, Wearables, Apps, Telehealth, Health IT, and Personalized medicine. The bars are arranged in a way that they appear to be part of the 'Healthcare' and 'Technology' circles, but not the 'Digital Health' circle. The background is a light blue gradient with a pattern of small white circles in the top-left and bottom-right corners.

Digital Health Use:

Current(ish) State

- 1 Likely to choose provider with online appointments booking
- 2 Plan to adopt augmented intelligence
- 3 Acquire health information using chat bots
- 4 Use of virtual visits
- 5 Use of remote monitoring devices

DOES IT
MOVE?

NO

YES

SHOULD
IT?

Quality Improvement Questions

01

Are we doing the right things to manage health and health care?

02

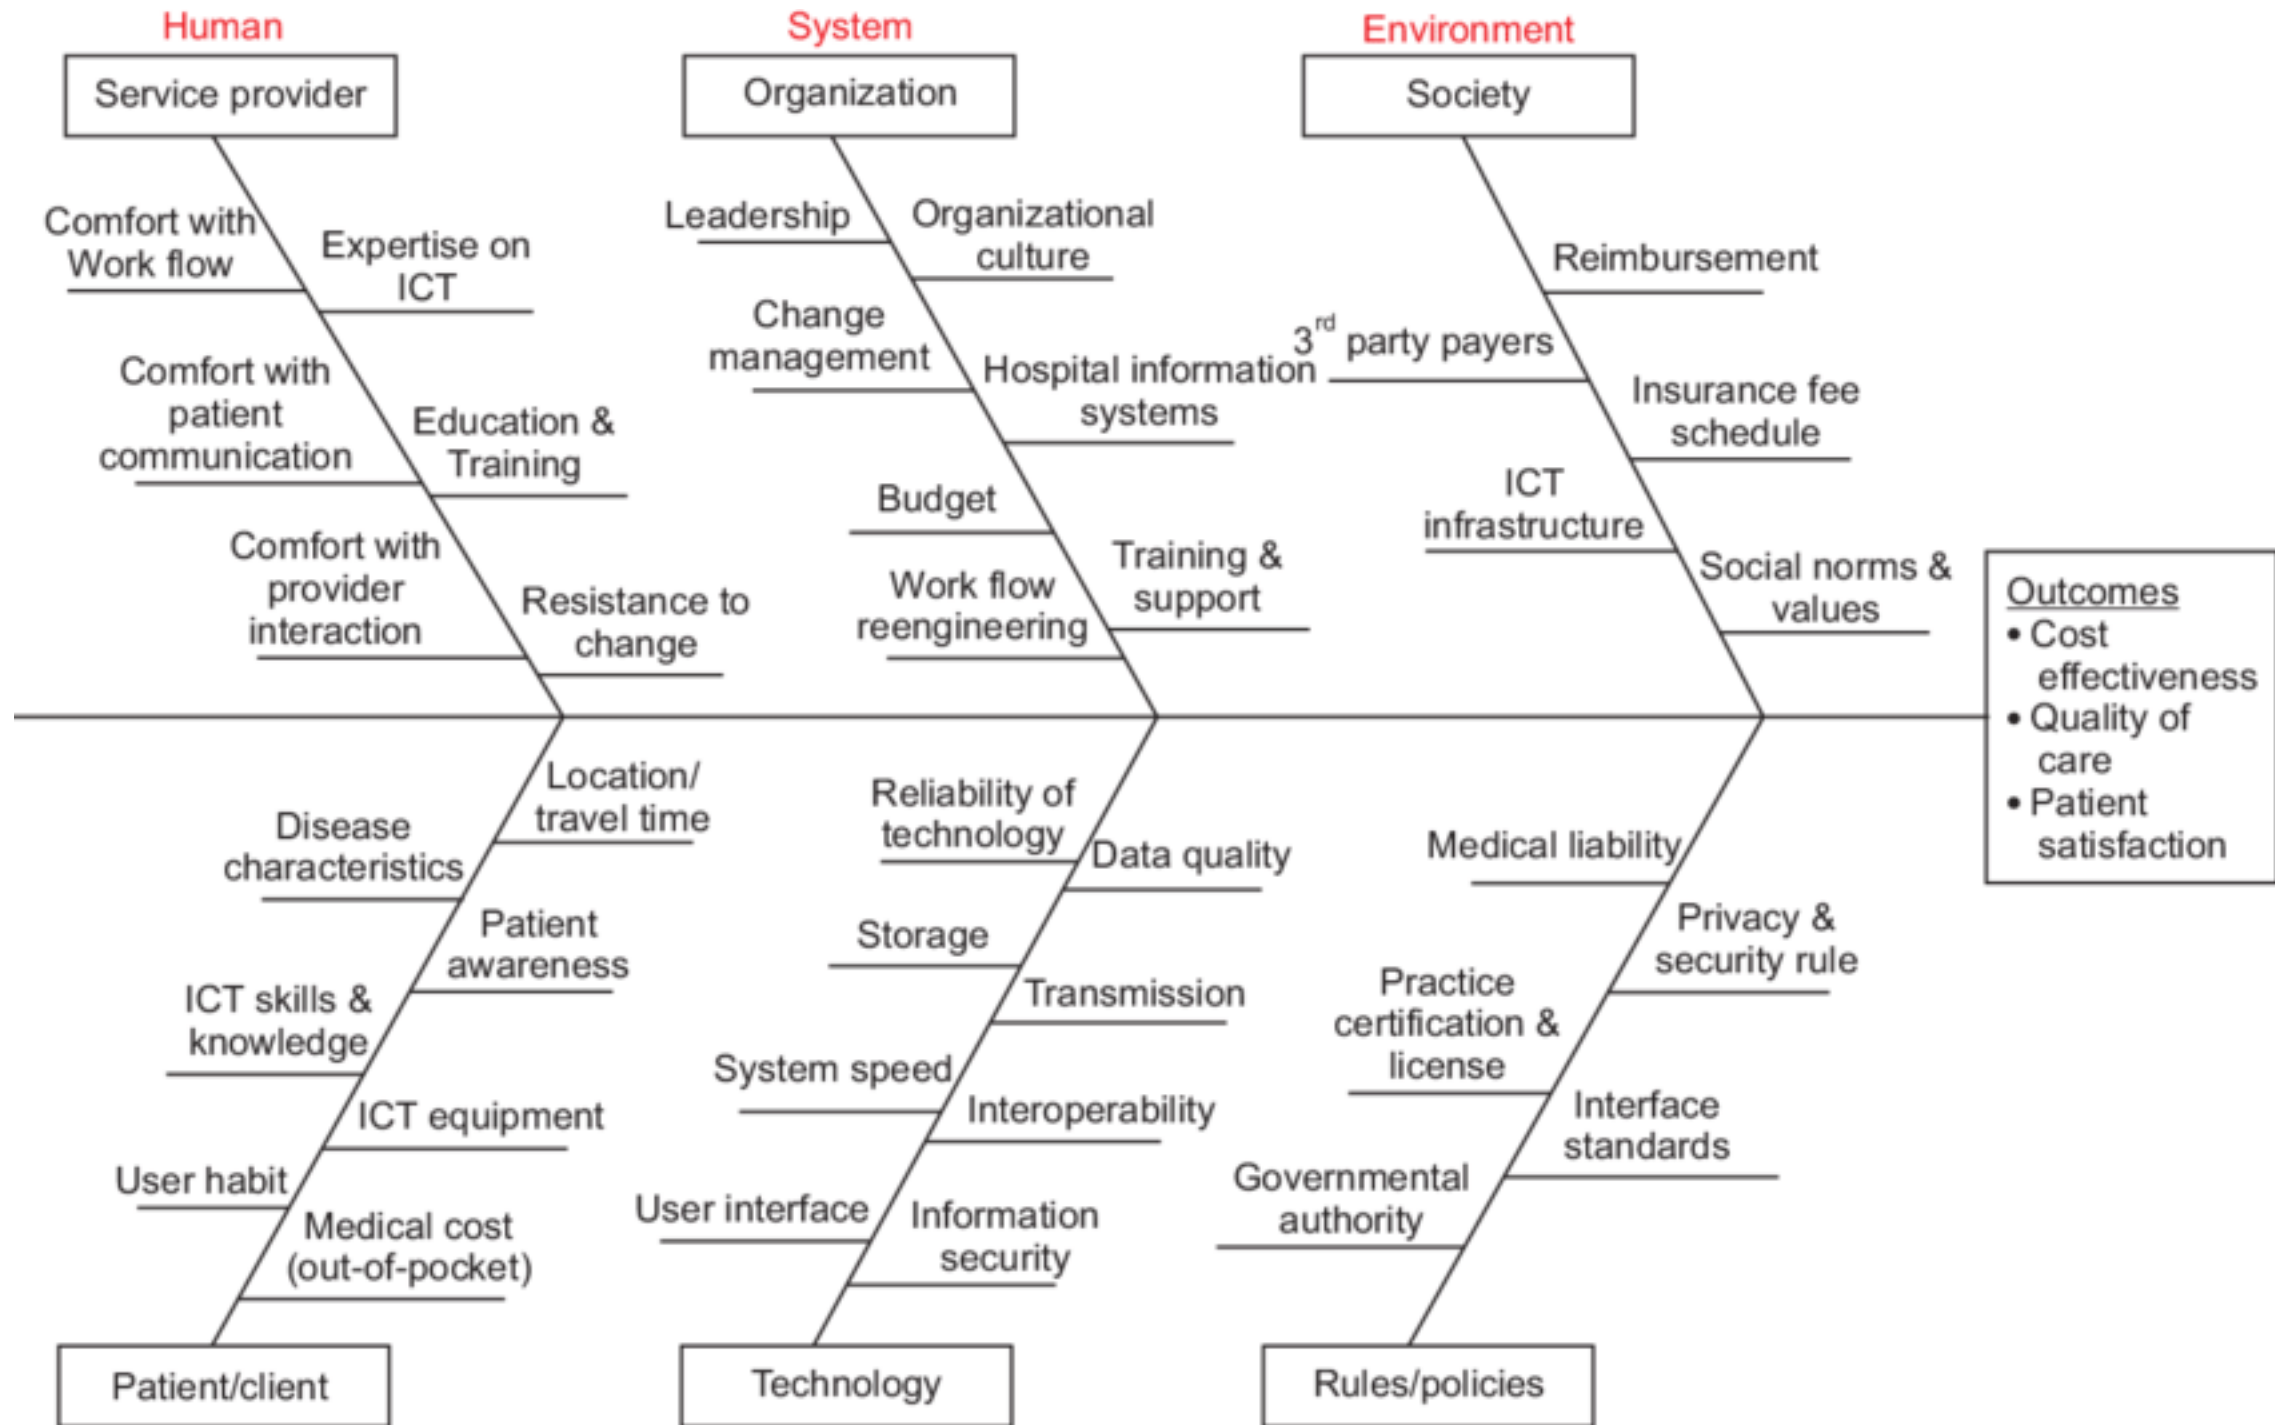

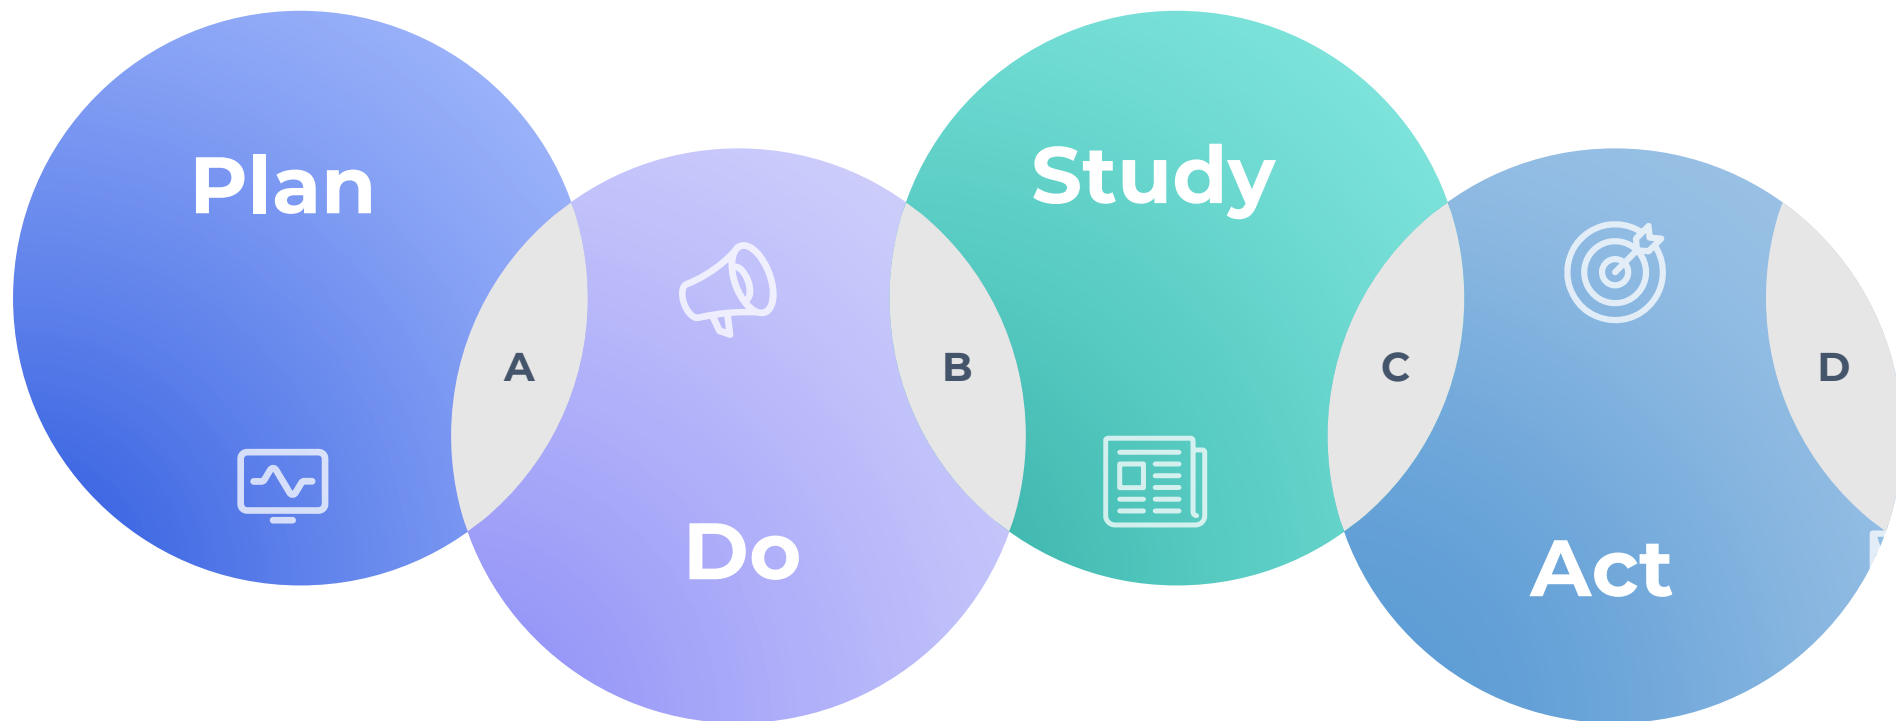

Are we getting the outcomes we want?

03

If not, what do we need to change?

A

What?
Why?
Who?
When?
Where?
How?

B

Specific
Measurable
Achievable
Relevant
Time

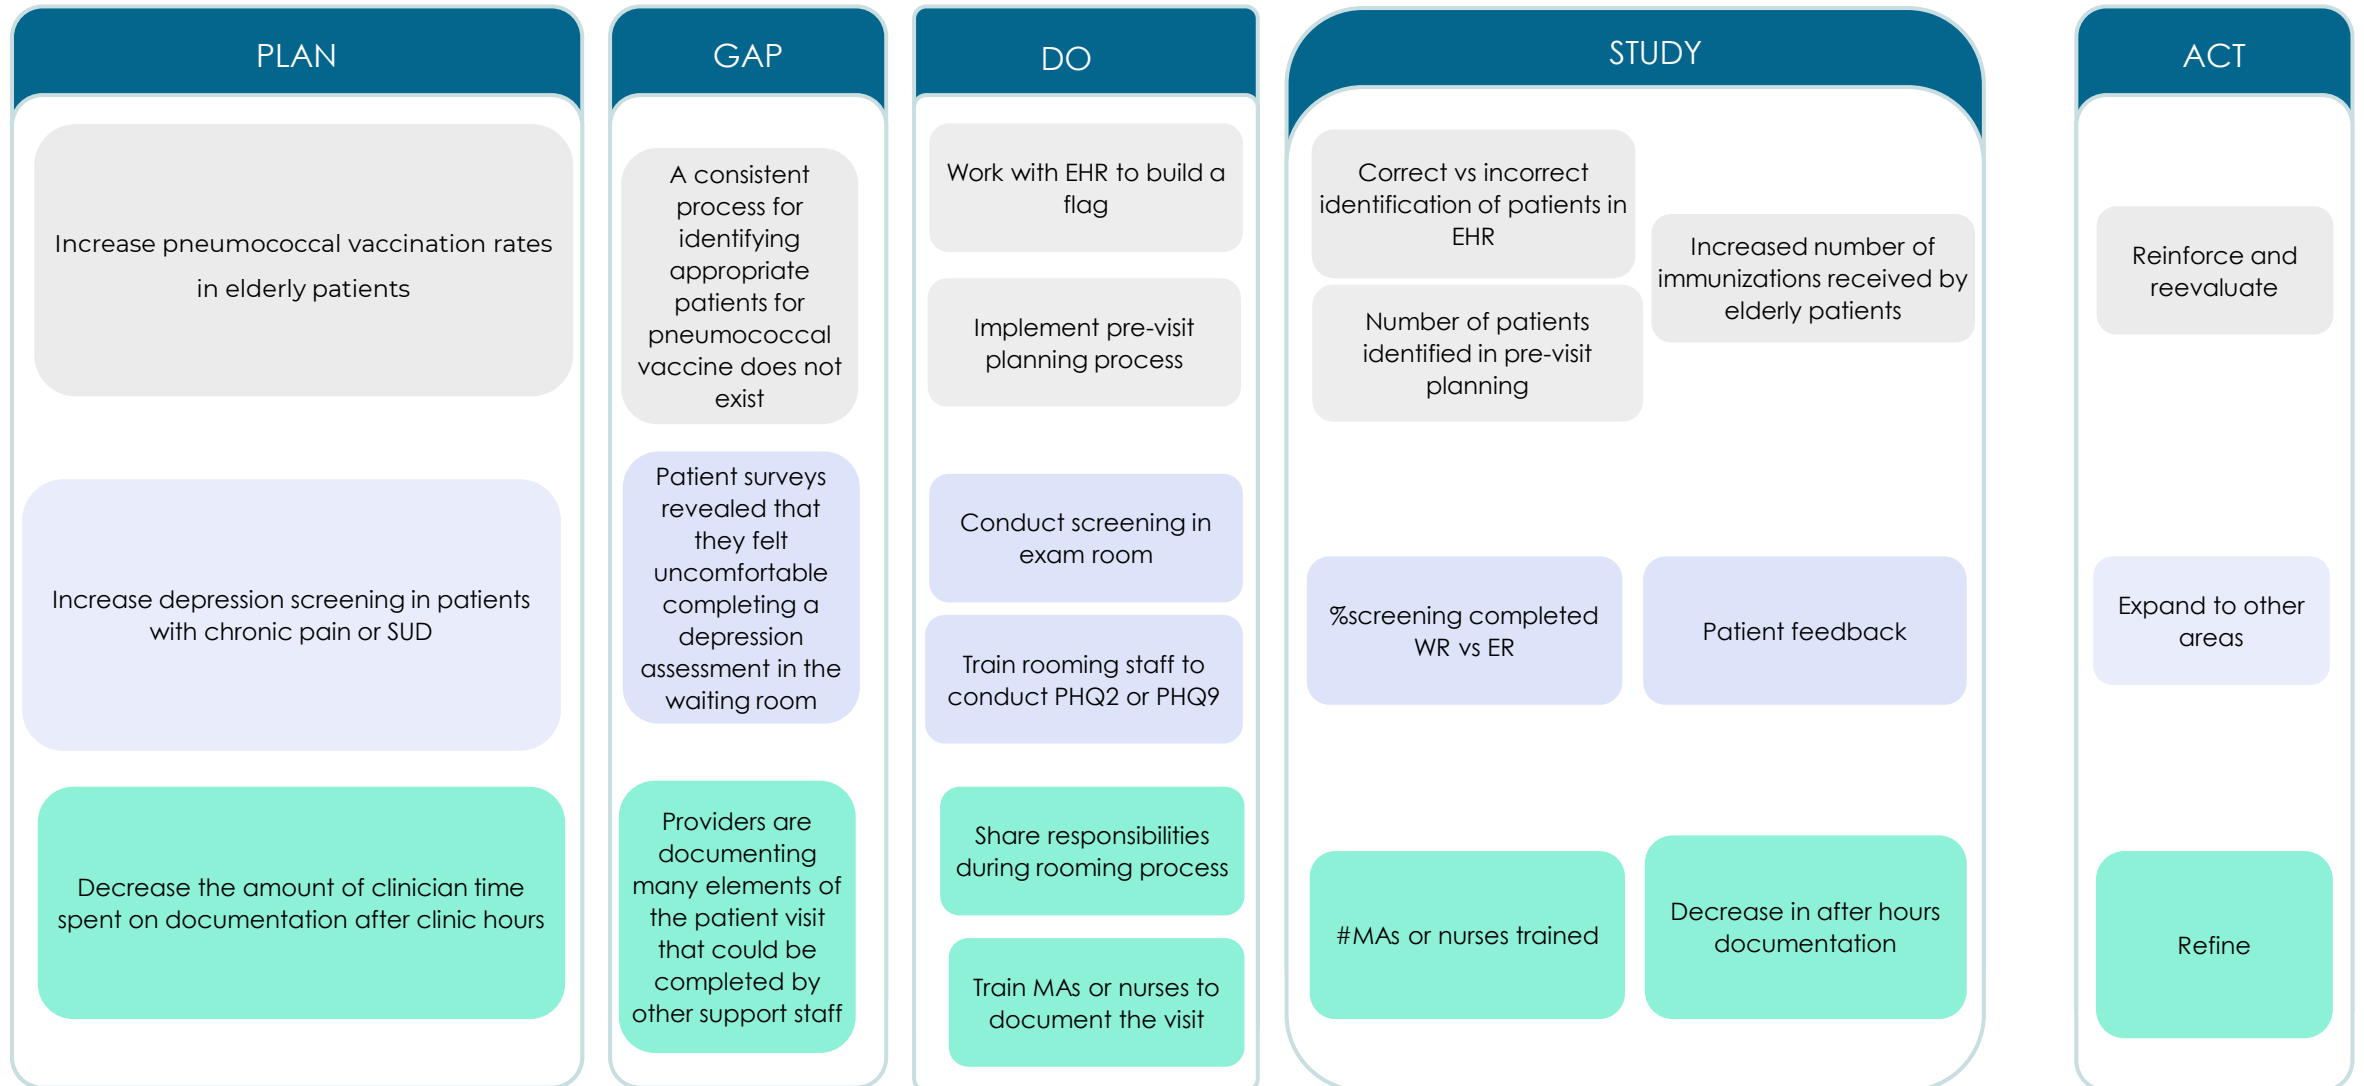

C

Analyze
Evaluate
Assess

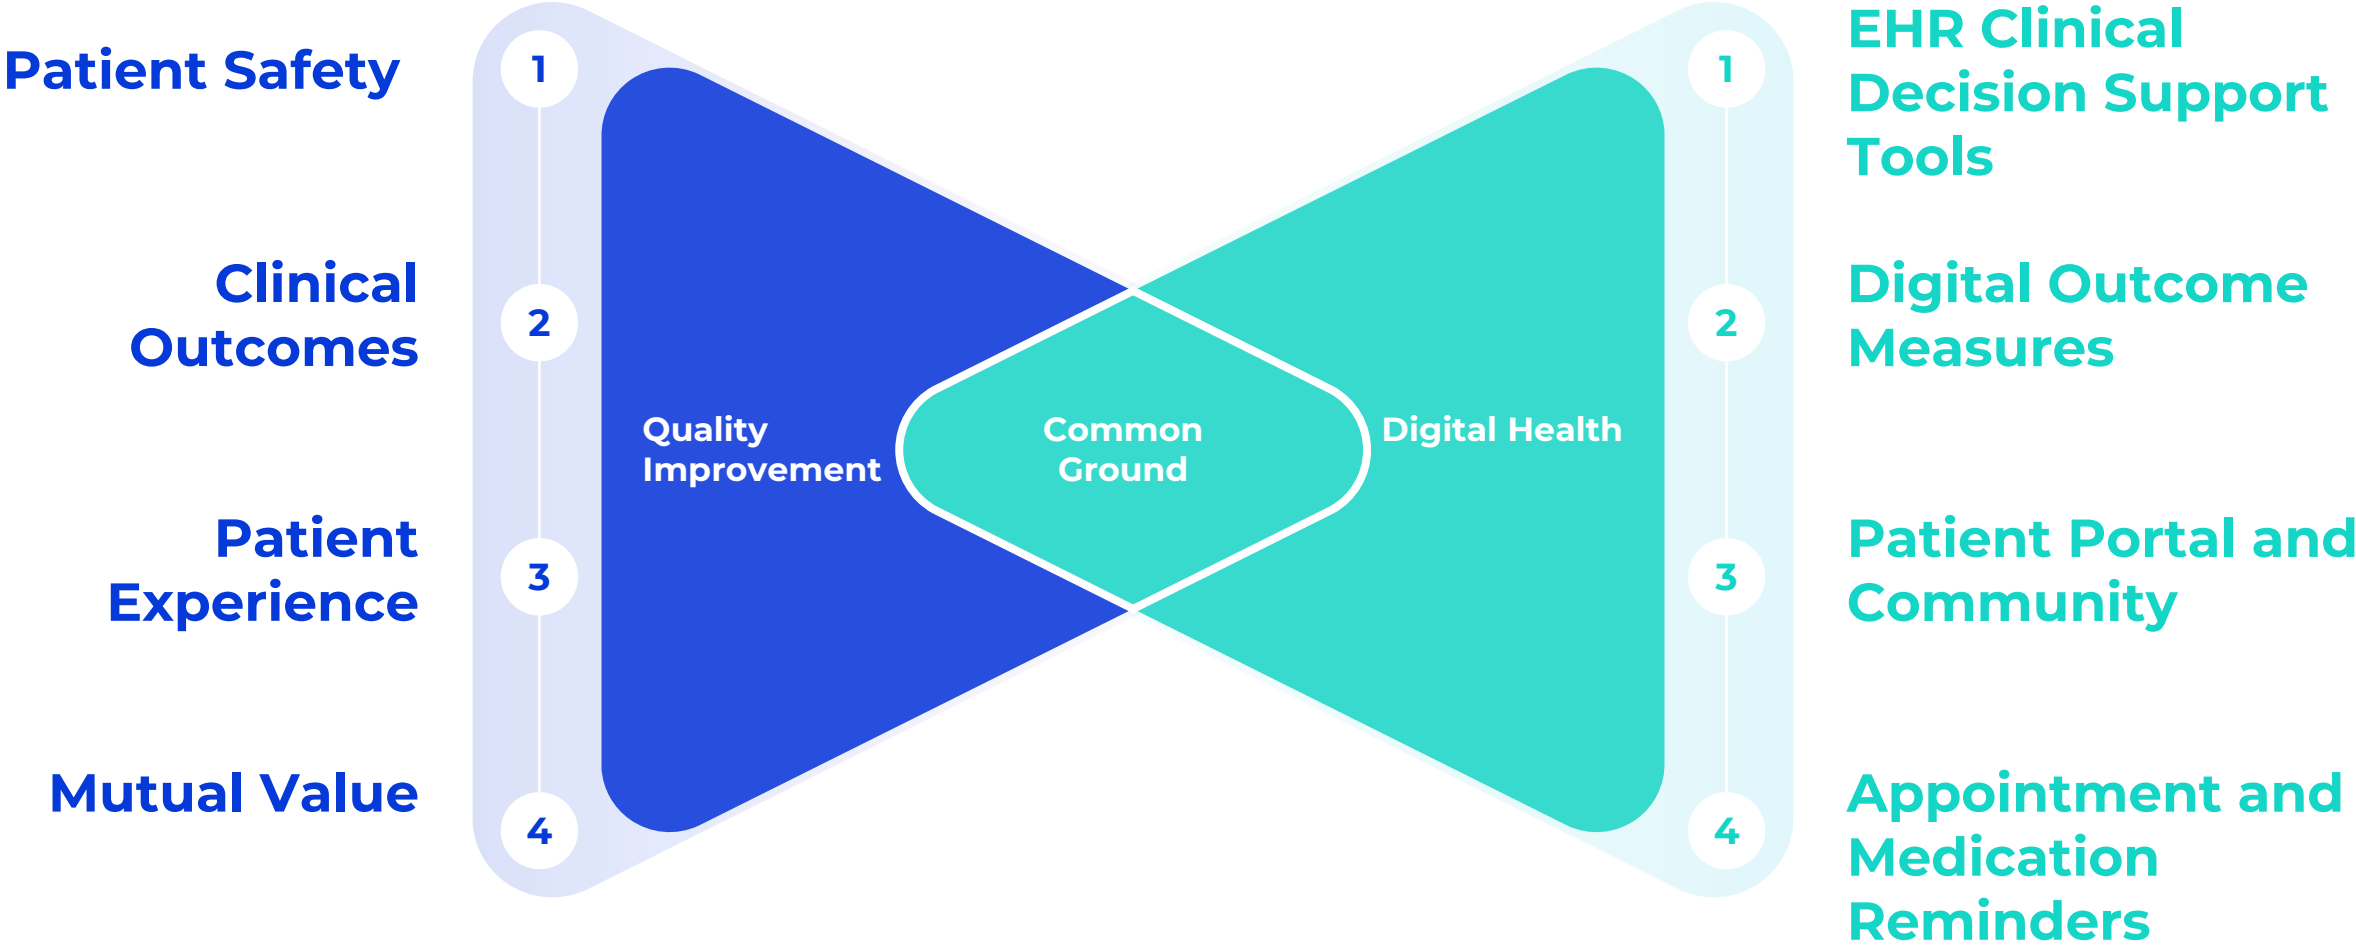

D

Adopt

Abandon

PDSA Examples

Quality Improvement and Digital Health

Leverage Quality Measures

Commit to a patient-centered approach in quality measure and value-based incentives programs to ensure that quality and safety measures address healthcare equity.

Meaningful Measures

Align measures across CMS, federal programs, and private payers to reduce the number and burden of measures.

Drive Outcome Measures

Accelerate ongoing efforts to streamline and modernize programs, reducing burden and promoting important focus areas.

Empower Consumers

Empower people through transparency of data and public reporting, so they can make well-informed decisions about their health care.

Transition to Digital Measures

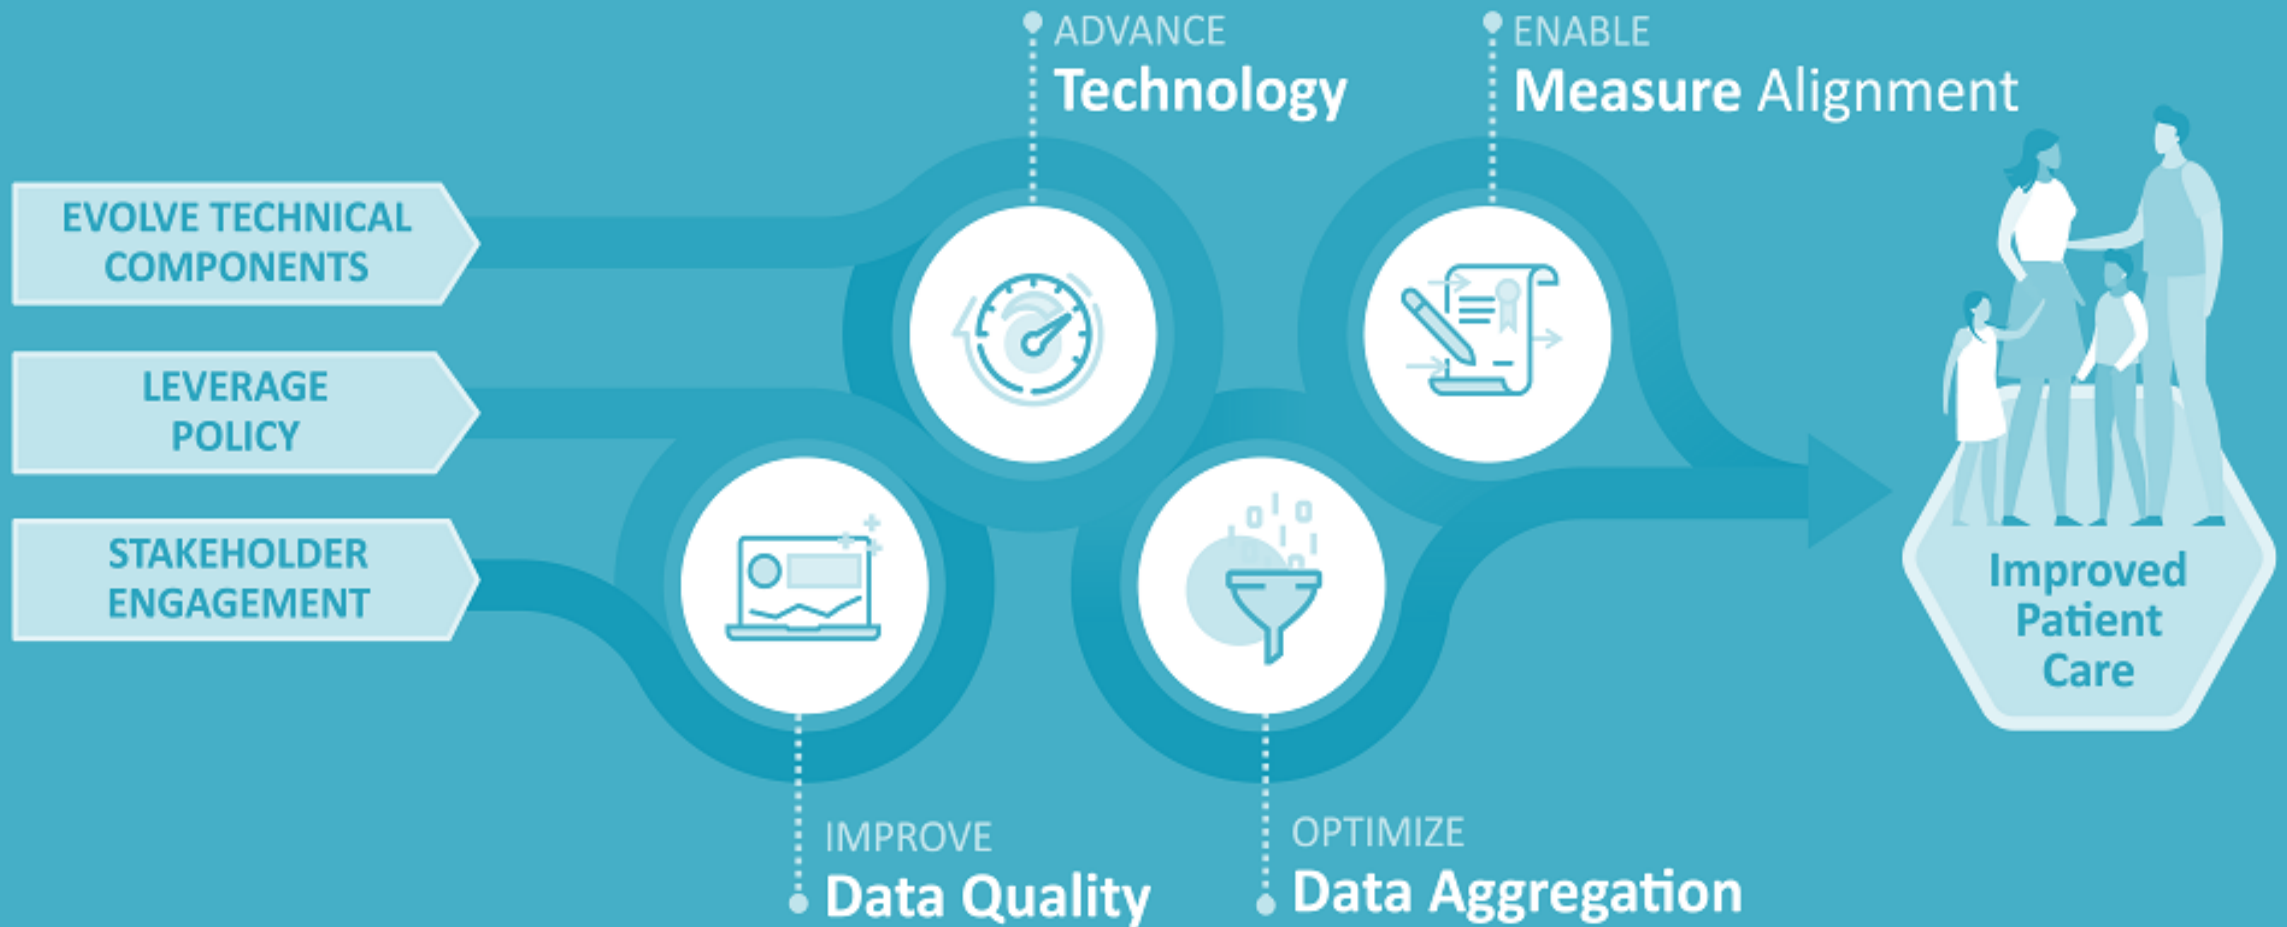

Use data and information as essential aspects of a robust healthcare infrastructure to allow for payment and management of accountable, value-based care and to drive insights that help health organizations evolve.

CMS Meaningful Measures 2.0

Advancing Digital Quality Measurement

STRATEGIC ROADMAP

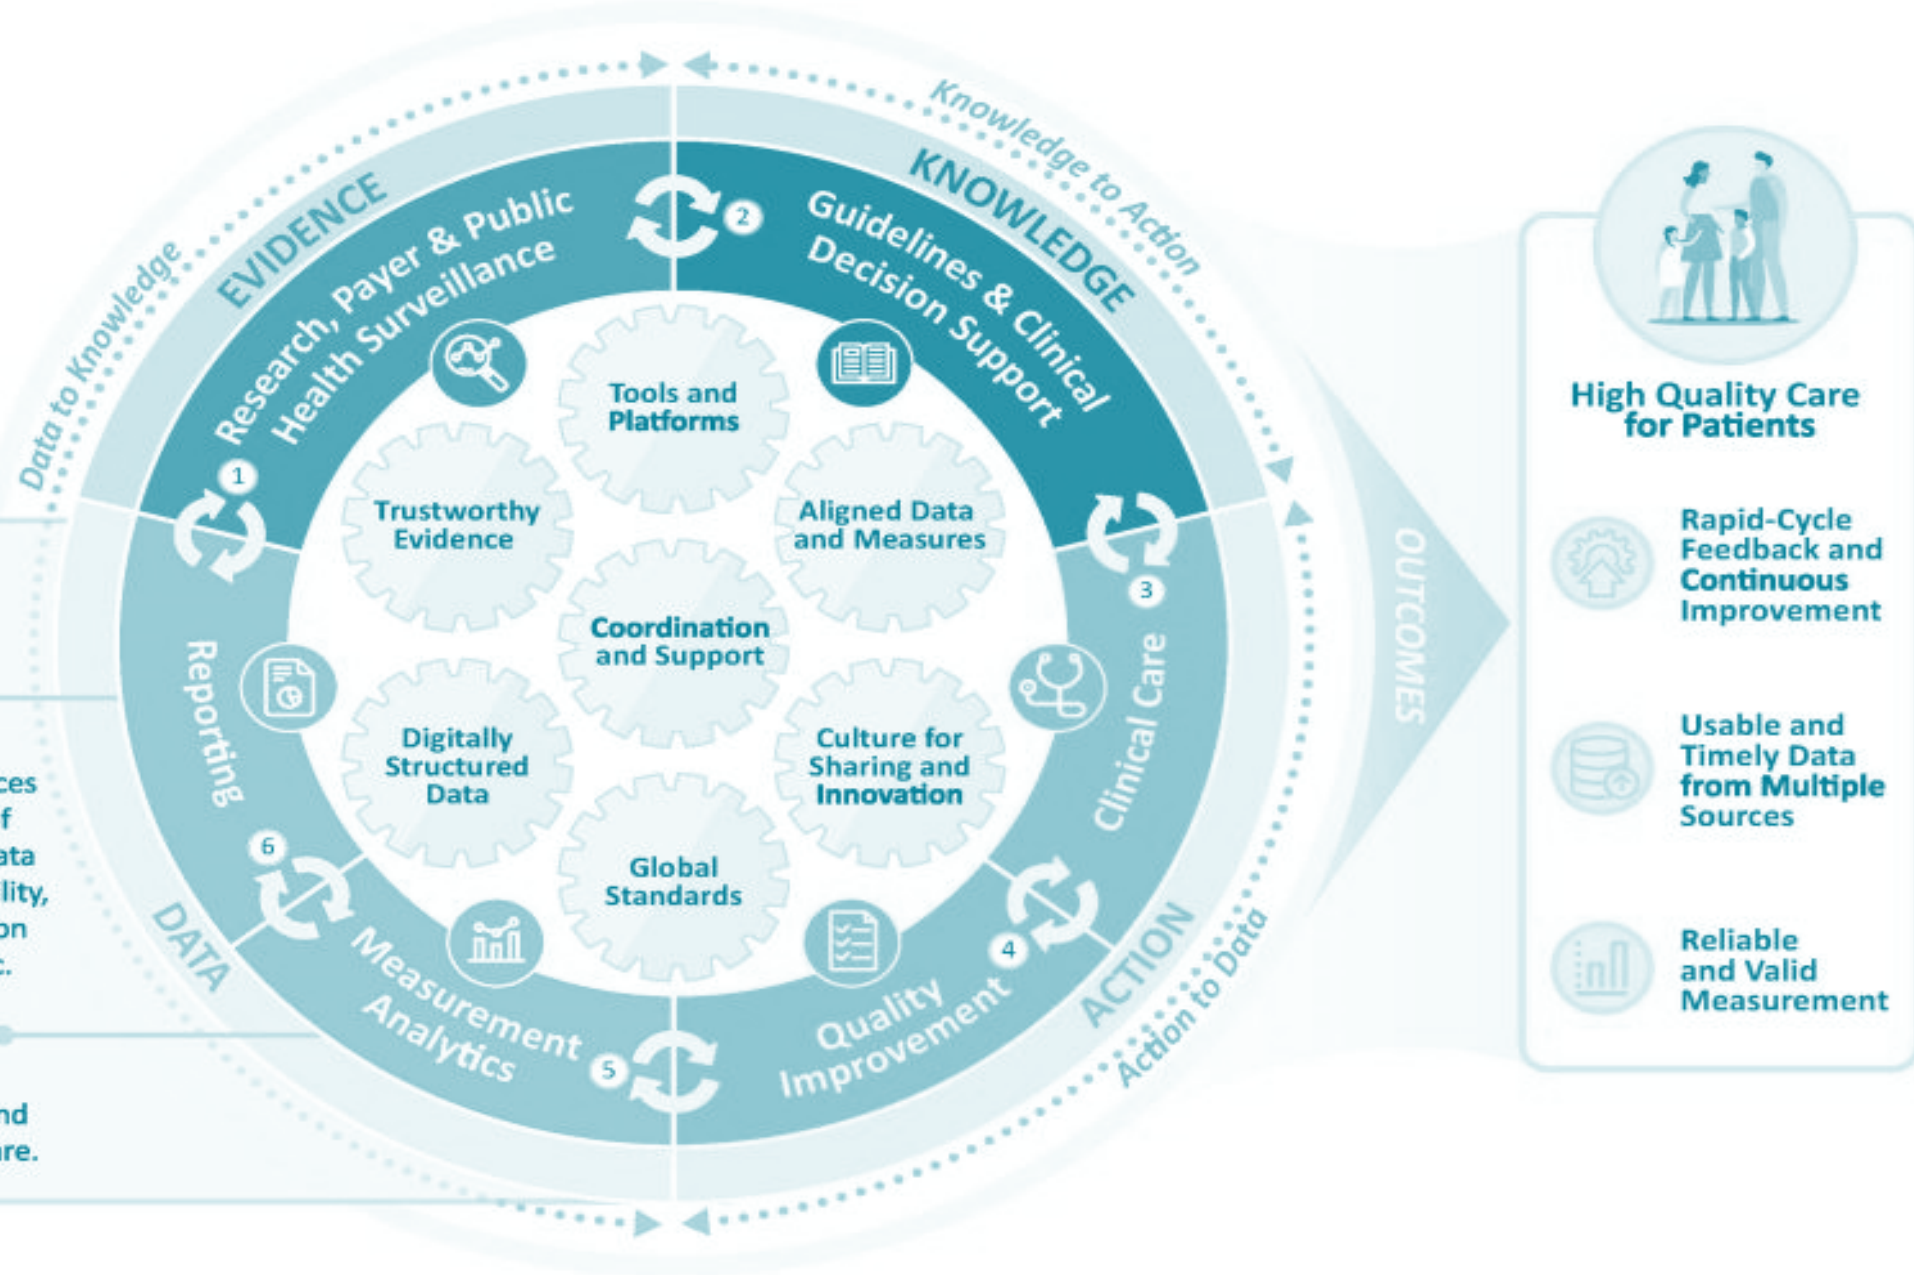

Digital Quality Measurement

Reporting

Quality measurement reporting via digital quality measurement advances CMS's goal of supporting delivery of high quality care, using the same data elements that support interoperability, quality improvement, clinical decision support, research, public health, etc.

Measurement Analytics

Digital data is also used for quality improvement activities, analytics, and measurement to improve patient care.

Support (CDS)

Clinical Quality
Information (CQI)

Public Health (PH)

Adapted from HL7® Clinical Quality Information (CQI) Workgroup by Maria Michaels, Centers for Disease Control and Prevention

dQMs

(digital quality measures)

Quality measures that use standardized, digital data from one or more sources of health information that are captured and exchanged via interoperable systems; apply quality measure specifications that are standards-based and use code packages; and are computed in an integrated environment without additional effort.

Administrative
Systems

Assessment Data

Care Management & Population Health

Activities that help practices better manage and engage patients in a patient-centered manner.

	Patient Engagement	How does the practice or organization enable patient access to care, information and collaborative care management?
	Evidence-Based/Standard of Care	Does the practice or organization use patient data, tools and resources to guide appropriate clinical decision-making?
	Quality Metrics	Does the practice or organization strengthen clinical documentation and capture data to support quality measurement and quality improvement?
	Workforce	How does the platform help manage oversight of clinicians/staff and team-based care?
	Continuity of Care	Can a patient's care over time be effectively managed through care coordination and data sharing?

Operational & Infrastructure Integrity

Activities that are an underpinning of the technology and support operational needs.

	Regulatory Compliance	Does the practice or organization comply with applicable Federal/State laws and regulations?
	Financial Considerations	How does the practice or organization help support coding, billing and contracting needs?
	Privacy & Security	Are there safeguards to ensure patient data is secure?
	Technology & Interoperability	How does the practice or organization assess its technology to ensure it meets clinical care delivery needs?

What and Where to Measure

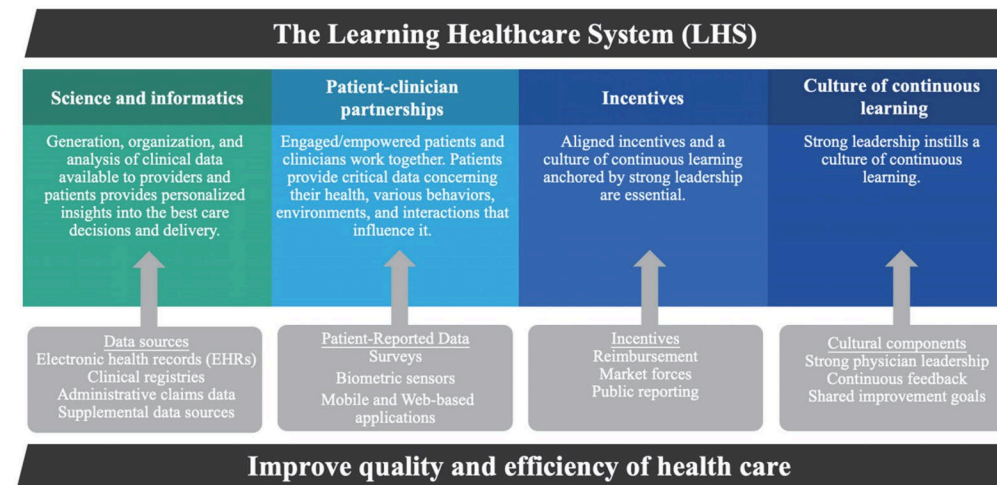

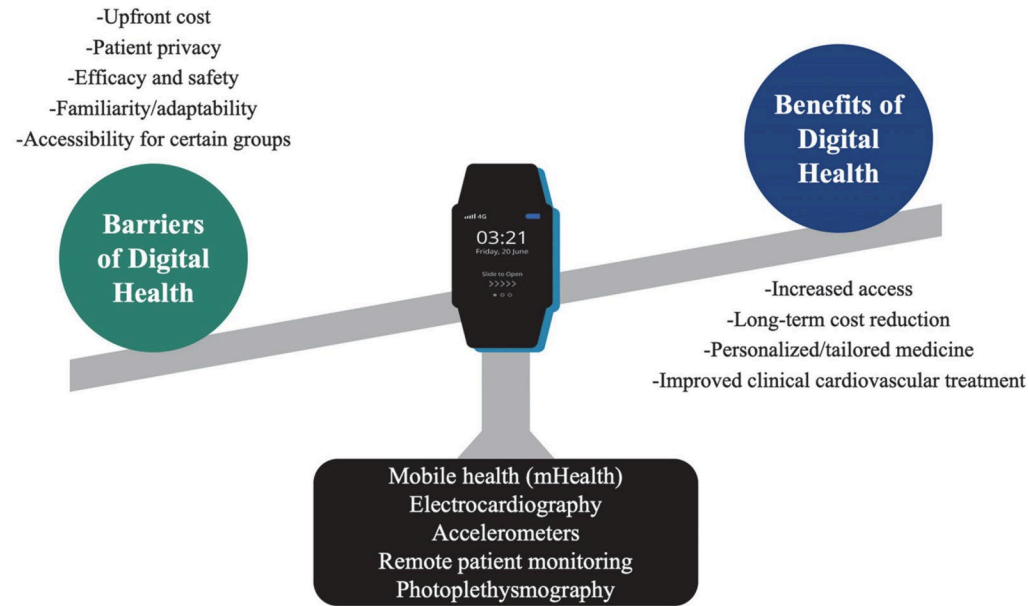

Reduce cost
of data
collection

Expand range
of usable data

Leverage
the broad
adoption of
EHR, etc.

Establish a
digital
foundation
of ongoing
production..

Factors Affecting Healthcare Facilities' Ability to Adopt Digital Technologies

BOX 1 | Core Principles for Stewards of the Digital Health Infrastructure and Data

Personal: Discretion on control and use of personal data resides with the individual or their designee.

Safe: Data stewardship protocols safeguard against use resulting in personal harm.

Effective: Data are collected and maintained according to validated stewardship protocols.

Equitable: Data systems are designed to identify and counter bias or disparities.

Efficient: Every digital equipment acquisition or service license enhances health system interoperability.

Accessible: Data are available when and where needed for decision-making.

Measurable: Digital health performance is continuously monitored for accuracy and interoperability.

Transparent: Personal data sources and uses are clearly indicated, including timing and context.

Adaptive: Data strategies are regularly calibrated to ensure continuity, currency, and utility.

Secure: Data sharing protocols are considered secure by users.

Policy and Practice Recommendations

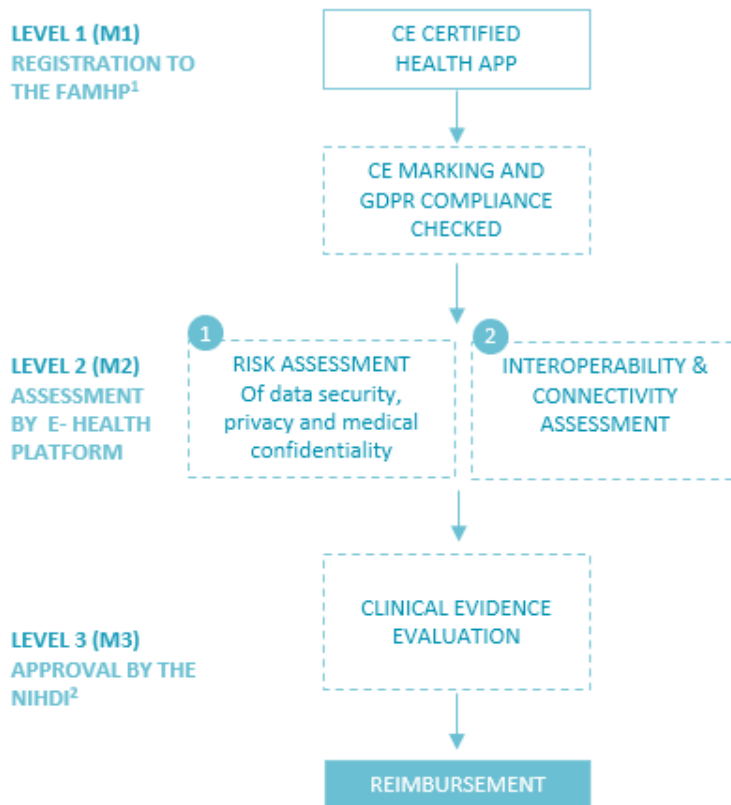

THERE ARE DIFFERENT REIMBURSEMENT ROUTES FOR DIGITAL HEALTH APPS IN 'LEADER' COUNTRIES

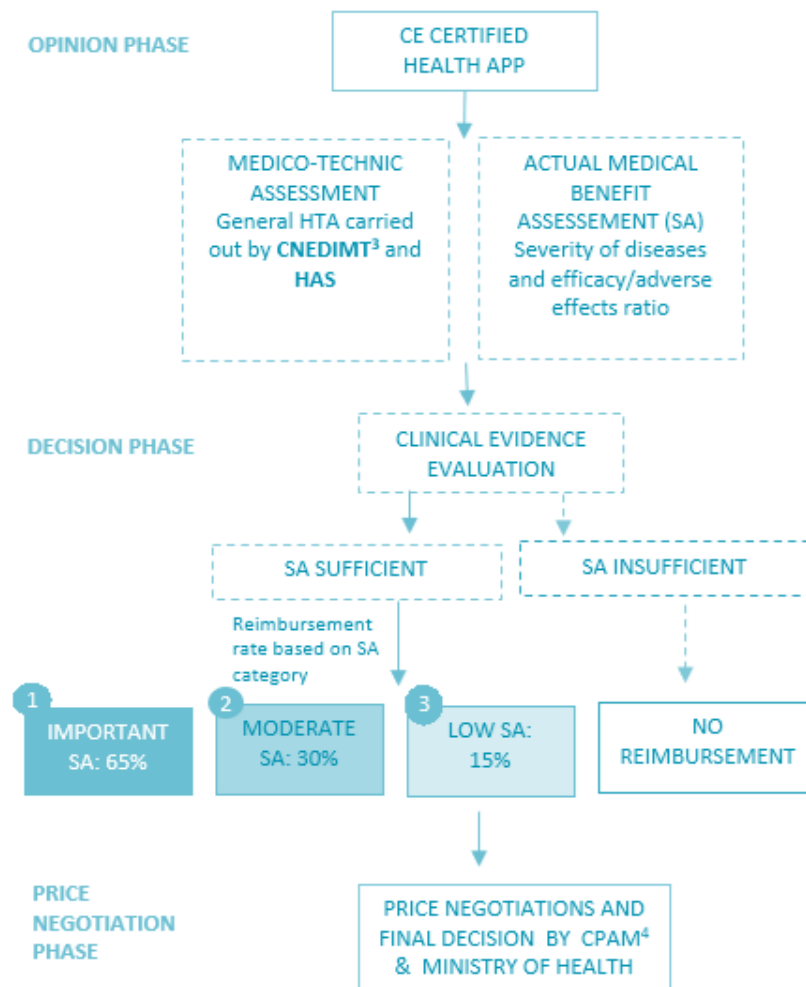

DiGA reimbursement pathway in Germany

mHealth Validation Pyramid in Belgium

Current DTx reimbursement route in France

1. Federal Agency for Medicines and Health Product
2. National Institute for Health and Disability Insurance
3. Medical device and health technology Evaluation Committee
4. Social Security Fund Caisse Primaire d'Assurance Maladie

Global DTx Reimbursement Landscape

Germany

45 DiGAs Reimbursed in Germany

DiGA (Digital Health Application) Key: Permanent (BLACK), Provisional (RED) Price Shows: Gross Price (negotiated, arbitrated, or not)

DEPRESSION:

- MY SEVEN STEPS Depression (€470,00) – trial period 2/17/23-2/18/23
- elona Depression (€335,49) – **new** trial period 12/26/22-12/25/23
- edu Depression (€357,00 1st Rx, €178,50 follow-up Rx) – **new** trial period 12/26/22-12/25/23
- novego Depression (€249,00)
- Selfapy Depression (€217,18)
- deprexis GAIA Depression (€210,00)

STRESS & ANXIETY:

- Selfapy GAD (€228,50)
- HelloBetter Burn Out & Stress (€235,00)
- novego Anxiety (€219,98)

INSOMNIA:

- HelloBetter Organic & Non-organic Insomnia (€599,00)
- somnio Inorganic insomnia (€224,99)

TINNITUS:

- My Tinnitus App Tinnitus (€449,00)
- kalmeda Tinnitus (€189,00)

WOMEN'S/MEN'S HEALTH:

- HelloBetter Vaginismus (€235,00)
- kranus health Erectile Dysfunction (€656,88)
- endo app Endometriosis (€598,95)

MSK DISORDERS:

- med Companion patella Musculoskeletal (€345,10)
- MAWENDO Musculoskeletal disease of the kneecap (€119,00)
- re flex Gonarthrosis, knee (€784,21)
- VIVIRA Back, Knee & Hip Pain – 40 indications (€206,79)
- kaia Back Pain (€489,39) – **new** permanent listing 2/3/23

PANIC DISORDERS:

- Invirto Agoraphobia, Panic Disorder and Social Phobias (€620,00)
- Mindable Panic Disorder and Agoraphobia (€576,00)
- HelloBetter Panic Disorder (€599,00)
- velibra GAIA Agoraphobia, Panic Disorder, GAD, Social Phobias (€230,00)

DIABETES:

- HelloBetter Diabetes + Depression (€222,99)
- Diabetes (€499,80)

SUBSTANCE USE DISORDERS:

- Tobacco Addiction, (€249,00) – **new** provisional listing 1/29/23
- Tobacco Addiction, Smoking Cessation (€329,00 1st Rx, €119,00 follow-up Rx)
- Alcohol Dependence (€192,01)

BREAST CANCER:

- Breast Cancer survivors (€952,00)
- Breast Cancer (€535,50)
- Breast Cancer (€399,84)

OBESITY:

- Obesity from excess caloric intake, Grades I&II (€499,80)
- Obesity (€426,96)

GI DISORDERS:

- Irritable Bowel Syndrome (€574,56) – trial extension for 11 months to 12/25/23

MULTIPLE SCLEROSIS:

- Multiple Sclerosis (€2077,40) – **new** trial period 1/7/23-1/6/24
- Multiple Sclerosis w/ fatigue (€243,00)

EATING & PERSONALITY DISORDERS:

- Selfapy Binge Eating Disorder (€540,00) – **new** trial period 1/5/23-5/4/23
- PRIovi Unstable Borderline Personality Disorder (€855,82)
- Selfapy Bulimia Nervosa (€540,00) – **new** trial period 1/5/23-5/4/23

OTHER INDICATIONS:

- Chronic Pain (€399,00) – trial extension for 7 months to 7/17/23
- COPD (€415,00) – **new** trial period 12/26/22-12/25/23
- kaia Cephalea Migraine (€690,00)
- Chiesi Aphasia and Dysphasia (€487,90)

Access to Prescription Digital Therapeutics Act of 2023 (S.723/H.R.1458) Introduced

Bipartisan, bicameral legislation; supported by AMCP & other organizations, Current Co-sponsorship: 8 Representatives, 4 Senators as of 4/14/23
